## Building & Assessing Your Own Public Opinion Poll

Background: Since George Gallop first created a poll in 1932, polling has erupted into a multi-billion dollar industry which can be seen in the major news stores and even discussed in high school government classes. The polls candidates (usually the president); their preferences about possible course of government action; and their general attitudes toward politics and the political process.

This project can be completed electronically with survey monkey or by on paper by contacting (phone call, email, social media) students from SAHS and beyond. If you choose to complete it on paper, you will tally your results and display your data.

### UTILIZING SURVEY MONKEY

Set up an account at [surveymonkey.com](http://surveymonkey.com) using your school email. Design your own survey on the political issue you have selected.

Develop and type your questions and the desired response type (multiple choice, scale).

You will select your sample and send out your poll via email or send a link on a social media app (appropriate). Survey monkey will tabulate your results for you to interpret and display.

Steps:

1. Create a Public opinion poll, 10 questions on a particular public policy area.

Select your area of interest in current public policy. (use the policy areas from current events)

Each student will develop a political opinion poll with either multiple choices or on a 5 point rating scale. The survey can, if you able, be approved by your teacher prior to be administered.

In addition to the ten questions, your poll must include demographic data including gender, grade level, race/ethnicity, and political party (provide options in survey)

The wording of your poll questions is critical. The wording of your poll questions is critical. The wording of your poll questions is critical. Otherwise your public opinion poll results will not be reliable.

2. Select the Population Sample
